Overview

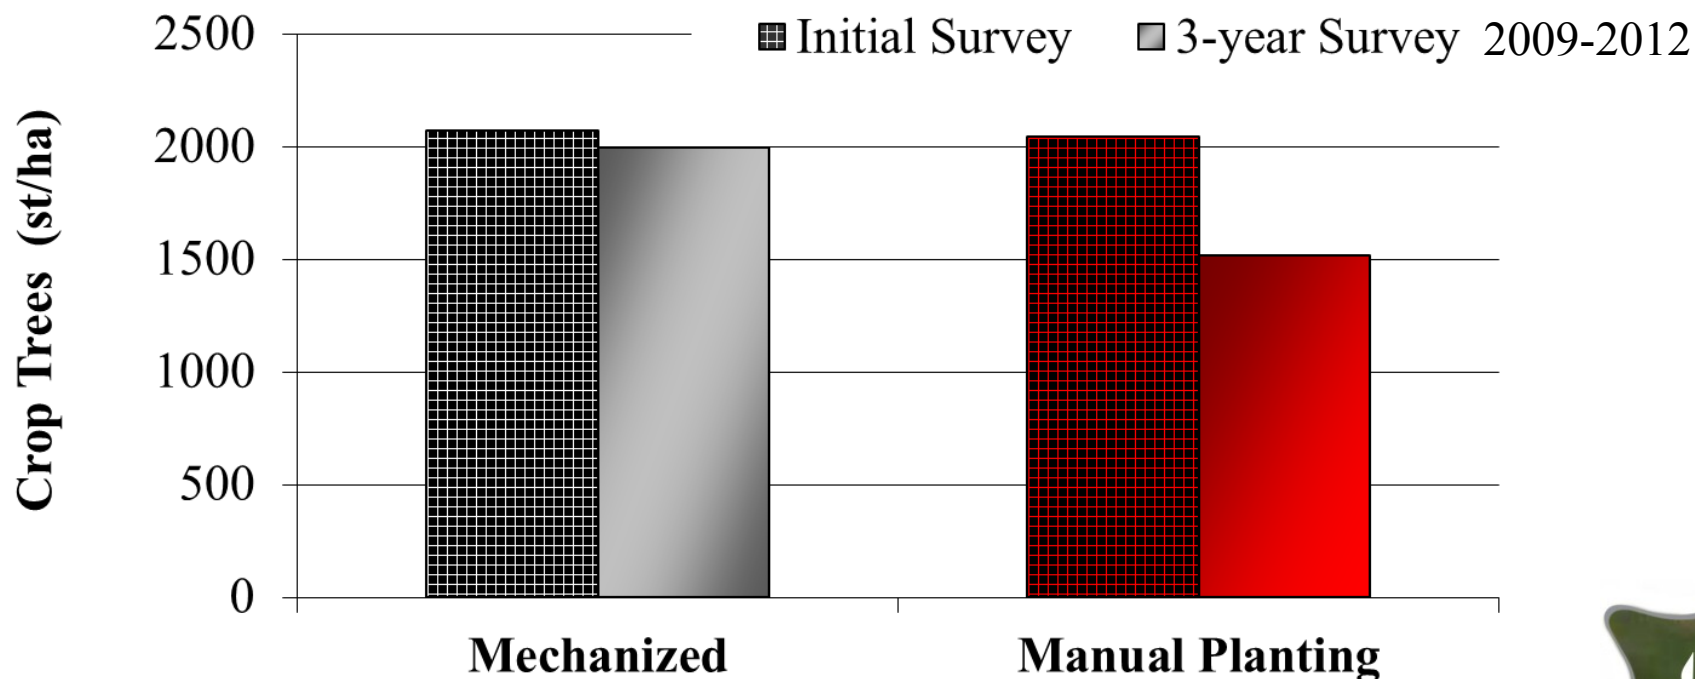

1. Background
2. Objective
3. Materials and Methods
4. Results
5. Summary

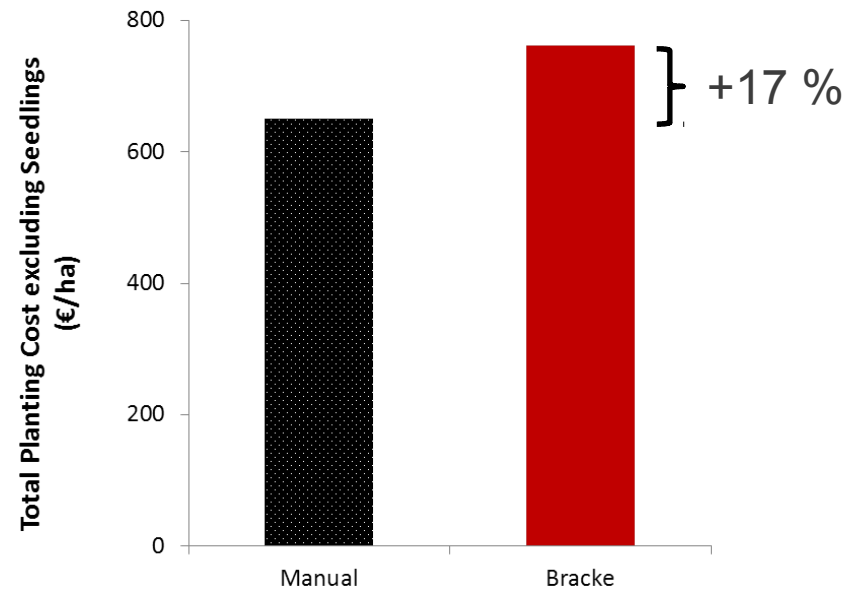

Why Mechanized Tree Planting?

Better planting quality

- Spot mounding, deep planting, educated operators

Planting Machines in Sweden Today

Mean Values for Södra Skog 2006-2011

How to Increase Productivity?

One □ Two heads per device

– One □ Two arms per excavator

Objective

Determine if 2-armed excavators are potentially more than just Science Fiction!

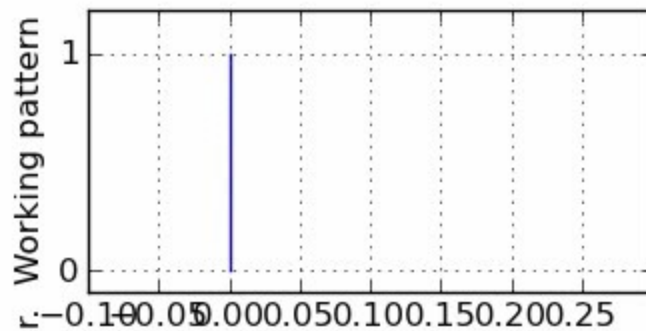

- ✓ **Under Nordic clearcut conditions** = various quantities, distributions and sizes of stones, roots and stumps

SimPy Discrete-Event Simulator

Materials and Methods

Three main models:

1. Terrain

+

2. Machine

3. Simulation

Terrain Models

Type stands from Herlitz 1975

Terrain Model	Description	Stumps/ha	Boulder Quota
1-4	Few-many stumps, Few-many stones	230 - 635	25 - 75%

from Andersson
et al. 1977

Stumps, Root Plates & Roots

Input: Dbh, DStump & species

Comparing the Number of Immobile Stones on Terrain with 25% or 75% Boulder Quota

Machine Models

- 1- and 2-armed models
- With autonomous functions for mounding, planting and some crane movements
- 4 main tasks: moving crane, choosing microsites, mounding, planting

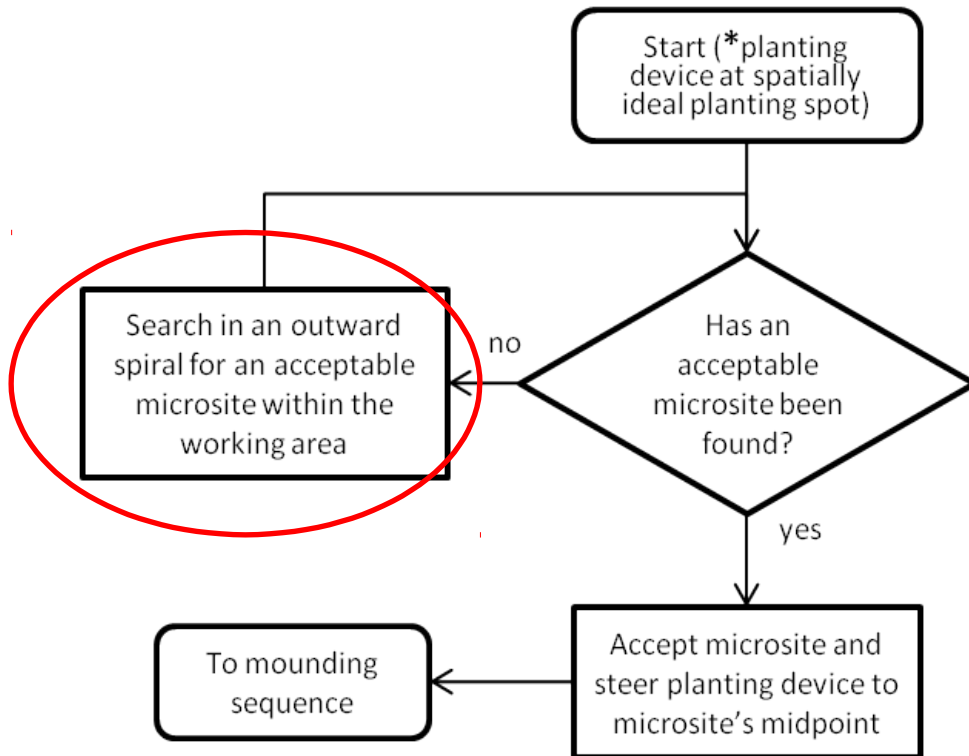

Simulation Models

Working area & Work pattern

Microsite Selection Algorithm

Mounding and Planting

– Fifth level

Results

Effect of Automation on 2-armed Machine Productivity

Summary

1. Functional terrain models

- Now with stumps, roots, stones, **surface boulders** and variable **humus depth**

3. Detailed machine models

- which interact with the terrain during scarification and planting

Paldies!
